DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I (claims 1-2), and further Species B (claim 2) in the reply filed on 11/16/2005 is acknowledged.
2. Claims 1, 3, and 4 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Priority

3. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

4. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claim 2 is rejected under 35 U.S.C. 102(b) as being anticipated by Goto (EP 1099869 A2) or under 35 U.S.C. 102(e) as being anticipated by Goto (US 6,537,390).

Note that '390 is a patent family member of '869.

Goto teaches a rolling member comprising; a surface portion defined as a range from a surface of a rolling face until a depth where a maximum shearing stress acts on, said surface portion containing carbon in total amount between 1.0 to 1.6 wt% and an amount of residual austenite being 20 to 35 vol%; wherein a compression residual stress of said surface portion is 150 to 1000 MPa, wherein a surface hardness of said surface portion is 64 or higher in Rockwell C hardness, wherein carbides precipitate on said surface portion, an amount of said carbides is 10 to 25% in an area rate and a particle size of each carbide is 3 μ or less (para. [005], lines 3-9 of '869).

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
